

VIHTAVUORI®

The Power of Accuracy

EST. 1922

INDUSTRIAL POWDERS

For Civil And Military Applications

MAKE BETTER CARTRIDGES WITH VIHTAVUORI POWDERS

TEAM UP WITH THE BEST

Vihtavuori powders are known throughout the shooting world for unbeatable consistency over production batches and over series of shots.

Shooting champions, serious recreational shooters and cartridge manufacturers alike trust Vihtavuori powders when they require consistent performance, ease of use, cleanest burn, most reliable ballistic properties and long-term storage.

Vihtavuori powder quality is assured by stringent testing and full control of the manufacturing process, starting with our own nitrocellulose. With selected raw materials and the technological leadership of our fully modernized factory, we are proud to produce the best powder in the world, constantly developing our operation to meet the customer's needs.

One of our key principles is that our partners never walk alone. We want to be sure that your product is top quality. Creating a winning cartridge is a joint effort, and we are ready to provide the key ingredient.

Nitrocellulose production

Manufacturing propellants entirely in-house ensures the highest quality. All Vihtavuori powders are made using nitrocellulose produced at our own plant.

Consistency as a standard

Consistency on a top level is our guiding principle. We require extreme precision and quality on every step of our production process, and the same mindset is extended to partner cooperation.

150 quality checks

We ensure consistent high quality through extensive quality control and strict tolerance levels. Up to 150 quality checks are made during the manufacturing process before powder is packaged and shipped.

Certificates

We produce a detailed control certificate for every gunpowder type. Our powders are certified for quality, environment, health and safety*. All powders are REACH compliant.

Nearly 100 years of experience

We value our long heritage and history, but those alone don't make great powder – the accumulated excellence and smooth processes growing from our long experience do.

Active & innovative

We believe that active research and development keeps us at the forefront. It also benefits our partners, as we are constantly bringing new powder types and innovations to the market.

WHAT'S IN IT FOR YOU

VIHTAVUORI
AMMUNITION / MANUFACTURER
FI-41330 Vihtavuori Oy
Tel. +358 10 5233

Efficiency

Due to the uniform grain size, propellant flows easily in loading machines, increasing the speed and efficiency of production. Consecutive batches are consistent in properties and performance – no need for readjustment.

Precision

Vihtavuori powders offer the best precision, consistency and cleanest burn, enabling the creation of a flagship cartridge. All powders come with anti-fouling agent.

Reliability

Our deliveries are fastest and most reliable on the market. We are proud of our brand, so we make sure that the final product is also top quality – our partners never walk alone.

Flexibility

Vihtavuori reloading and industrial powders match up. You can get preliminary test batches easily from the nearest retailer or by air freight. Powder recipes can be tailored to your specified needs.

Ballistic Test Center

Our test center is supporting our production quality control and producing ballistic data using the CIP and SAAMI specifications. With EPVAT testing, we are able to offer comprehensive functional quality tests in line with the NATO standard in different applications.

We take it personally

We think it's more convenient to do business personally. That's why you will be appointed a personal contact from our sales team, with the best expertise on your specific needs.

Finding the optimal solution

With the broadest offering of small caliber powders, top-of-the-line test facilities and laboratory services, Vihtavuori can offer the best solution for a wide range of ammunition.

Introducing a new powder into your production is a joint development project. We support the deployment with extensive controls, test shooting and technical support. We perform strict quality tests for all our listed and tailored powders at our facilities in Vihtavuori. Our personnel are at your service to ensure the best quality of your final product.

Laboratory

Our laboratory provides all the material tests and analyses needed to ensure quality and compatibility with the final application. We work according to international standards. We also provide tests and analyses for your needs beyond our cooperation.

Warehouses in Europe and US

Our warehouses on two continents ensure fast and reliable delivery around the world.

Rifle powders

We manufacture small caliber propellants for military and civil applications, and medium and large caliber propellants for various military purposes.

Vihtavuori has the widest range of small caliber powders on the market. The industrial powders match with our consumer products and can be tailored to fit various applications.

All small caliber propellants are of extruded type. Propellant grains are perforated cylinders, flakes or other shapes extruded for special applications. Grain geometry optimizes the burning behavior for the intended application.

Our fastest burning powder suitable for small rifle cartridges such as the 22 Hornet and 30 Carbine, but also well suited to many of the more powerful Magnum handgun rounds. It is particularly applicable for the 44 Magnum, 454 Casull, 500 S&W and similar high-performance revolver cartridges.

A well-balanced powder specifically for some of the intermediate cases such as the 300 Blackout and 7.62x39. It operates best at a somewhat higher pressure than the faster N110, and gives good results in a variety of the small to mid-capacity cases such as the 221 Fireball and 30-30 WCF.

A fast-burning rifle powder well suited to both small cases like the 22 and 6 mm PPCs, and large straight-walled cases such as the 45-70 and 458 Win Mag. N130 is also an excellent choice for lighter bullets in such cartridges as the 222 and 223 Rem. Exceptional accuracy combined with the benefits of our anti-coppering technology.

Ideally suited to the 6mm PPC, but it's also versatile enough to serve in a wide variety of cartridges. Especially where a relatively fast-burning powder is called for, ranging from the 222 Rem to the 45-70 Govt.

An excellent choice for lighter bullets in a number of small cartridges, N135 is a relatively fast powder that delivers outstanding accuracy, velocity and consistent performance. Well suited to cartridges like the 6 mm BR, 222 and 223 Rem, as well as large straight-walled cases such as the 458 Win Mag.

An incredibly versatile powder, well suited to a wide range of cartridges and bullet weights. From the 223 Rem with heavy bullets, to full sized powerhouses like the 375 H&H Magnum, our N140 is an ideal choice. Giving good velocities, clean performance and exceptional stability, this is the standard "go to" powder for a wide variety of cases.

Our N150 is a slow burning powder, well suited to most common mid-sized cartridges when used with heavier bullets. An excellent choice for 185-220 grain bullets in the 30-06, 140-160 grain bullets in the 6.5x55, and 175-200 grain bullets in the 308 Win. Combining Vihtavuori's latest anti-coppering technology and enhanced temperature stability, N150 is a tremendously versatile powder.

A slow-burning powder well suited to a broad range of Magnums, and large capacity/small bore cartridges like the 6.5-284. It is an ideal combination when used with the 270 WCF, 25-06, and a variety of belted Magnums. An excellent choice for lighter to mid-weight bullets in these cartridges, N160 is temp stable and exceptionally clean burning.

N165 is a very slow burning powder, making it a superior choice for the same range of cartridges as our N160 when using heavier bullets. Delivering slightly higher velocities with these projectiles makes N165 a wise choice when long-range performance is the goal. It delivers superb accuracy in the 338 Lapua Magnum, and is a top choice for that cartridge.

Our slowest burning N100 series powder, recommended for the very large capacity cases such as the 300 Weatherby Mag, the 300 Rem Ultra Mag. N170 is one of the slowest powders readily available from any manufacturer.

Vihtavuori offers two powders specifically for the 50 BMG case; 24N41 and 20N29. These are single-based treated powders, having very large kernel size and extremely slow burning rates ideally suited to the 50 BMG. They also have some application in a few other very large capacity cases, such as the 338 Lapua Magnum and the 30-378 Weatherby Magnums. Of the two, 24N41 is slightly faster than 20N29. We have loading data for both powders in some of the larger cased magnum cartridges.

Handgun & shotgun powders

Ten years minimum storage

N310 is an extremely fast-burning pistol powder, ideally suited to light, target type loads. It gives outstanding accuracy in a wide range of cartridges from the 32 S&W Long to the 45 ACP wadcutter loadings. Clean burning, consistent and easy to load, N310 is the top choice for the competitive shooters.

A fast-burning powder for use in light to mid-range target loads, in cartridges ranging from the 9 mm and 38 Special, up to the 44 Special and 45 ACP. Capable of producing higher velocities at acceptable pressures than our N310, N320 provides the handloader a bit more versatility at the loading bench.

This is a specialized powder intended to provide low bulk density for cartridges that were originally designed for Black Powder. The use of more conventional powder results in poor load density, and fails to adequately fill the case. Our N32C corrects this problem, and is ideally suited to many of the older cartridges used in Cowboy Action shooting, such as the 38 Special, 44 Special and 45 Colt.

N330 provides a wide range of latitude for the handgun shooter, serving well for everything from light target to heavier high-velocity loadings. This is a versatile powder suitable for an exceptionally broad range of applications, usable in cartridges from the 380 ACP and 9 mm, to 45 Colts.

A flexible powder that serves well in medium to heavy, high velocity loadings. N340 is a good performer in high intensity rounds like the 357, 41 and 44 Magnums, the 40 S&W and 10mm ACP, and the 357 SIG cartridges.

Our N350 is the slowest in the N300 series of handgun powders, and is ideal for very heavy loadings, and top end velocities and energies from a broad range of pistol and revolver cartridges. It is very well suited to loading powerful rounds such as the 10mm and heavy loads in the 45 ACP.

Originally developed as a powder for loading 22 Rimfire cartridges, 3N37 has a burn rate very similar to N350, and can be used for many of the same applications. As handgun shooters began to experiment with 3N37, they found that this fine-grained powder loaded evenly through a measure and gave excellent results from a range of competitive cartridges used for USPSA and IPSC shooting.

Our 3N38 is a specially designed powder specifically for competitive handgun shooting with high-velocity loads in the 9mm, 38 Super and 40 S&W cartridges. A relatively slow-burning powder, 3N38 is a perfect choice for making Major with good accuracy and the clean-burning characteristics for which Vihtavuori is renowned.

N105 Super Magnum is our slowest burning pistol powder, intended for the most powerful handgun cartridges in use today. Many of these specialized rounds operate at rifle pressures. Delivering this type of performance is precisely what prompted the development of N105. For such powerhouses as the 454 Casull, 460 or 500 S&W, N105 is an excellent powder choice.

N500

High energy
rifle powders

N500

High energy
rifle powders

N500 propellants provide the best performance for added velocity and range with heavy bullets. Nitroglycerine has been added to the traditional single base powder to increase energy content.

The fastest of our N500 High Energy series, N530 is an ideal for many of the smaller bottlenecked cases like the 223/5.56, or large straight-walled cases such as the 45/70 Springfield. It is also a useful powder for medium capacity cases like the 308 Win, when using lighter weight bullets of 155 grains or less.

N540 N540 is a mid-range powder in the N500 series, and an excellent choice for cartridges running from the 223/5.56mm, 308 Win and 30/06 Springfield with appropriate bullet weights. This is an excellent choice for the 223 when using heavy bullets running from 69 to 82 grains. It is exceptionally clean-burning and delivers outstanding accuracy.

N550 A slower burning powder very well suited to a wide range of medium to large cartridges, especially with heavier bullet weights. An ideal fit for many of the 300 caliber magnums with lighter bullets, but useful across a wide range of bore sizes. Particularly well matched to heavy bullet loadings in the 6.5x55 and 30/06 Springfield cartridges.

N555 The N555 rifle powder is designed for precision rifle platforms chambered in cartridges such as 6mm & 6.5 Creedmoor and .284 Win. and for rifle calibers with large case volume and comparatively small bullet diameters. N555 is the most temperature stable powder in its class, and features unprecedented performance in the 6.5 Creedmoor. Its unmatched lot-to-lot consistency also eliminates costly range time re-developing your favorite loads.

N560 A very slow-burning powder for large, magnum style cases, particularly when heavy bullets and high velocities are required. A perfect selection for the 270 WCF, 7 mm Remington or Weatherby Magnums, 300 Winchester, RUM or Weatherby Magnums or the new Nosler line of cartridges. A very good choice for the 338 Lapua Magnum when using lighter bullets of 250 grains or less.

N565 A N500 series powder developed specifically for heavy bullet (250 gr) loads in our own 338 Lapua Magnum cartridge. N565 roughly splits the difference in burn-rate between N560 and N570, but is a bit closer to N570. It will cover many of the same cartridges and bullets as the first two, but allows the loader another option in fine tuning a load to the perfect combination.

N568

N568 is the ideal choice for today's most popular large capacity magnum cartridges, such as the 6.5 PRC, .300 PRC, .300 Winchester Magnum, and .338 Lapua Magnum. N568's slow burning characteristics and short-cut grains provide extremely consistent metering for long range competitive shooters, accuracy enthusiasts, and hunters alike. N568 excels with heavy-for-caliber projectiles and provides exceptional temperature stability and is insensitive to humidity changes. An excellent choice for classic belted magnum cartridges such as 7mm Remington Magnum, .300 RUM, .338 Winchester Magnum and more.

N570

The slowest burning member of the N500 line, N570 is the perfect choice for those tasks requiring heavy bullets and the largest capacity cases. It's burn rate is very close to that of our N170, but will generally provide a bit more velocity in the same cartridges, and using the same bullet weights. The burn-rate characteristics of N570 allow it to deliver the very best possible performance from such cartridges as the 6.5x284, 300 Rem Ultra Mag, 338 Lapua Magnum and the 30-378 Weatherby Magnums.

Temperature stability

Our powder recipe guaranties stable function over a wide temperature range in different calibers.
